

Pli-Flange™ Cable Sleeving

Introducing the Pli-Flange™ cable sleeve for managing and hiding cables exiting the Wireport™ and Splitport™ plate or any hole which cables pass through. This new innovative product incorporates a flexible flange that is easily inserted and secured within both the Wireport™ and Splitport™ plates. The retention feature of the Pli-Flange™ secures the sleeving behind the plate and wall to prevent the sleeving from coming out. This feature keeps the cables completely covered in the cable management application.

The aesthetically pleasing sleek look is combined with the properties of PET braided construction which makes this product rugged to withstand cuts, abrasions, and tension. Use this product where cables exit the wall and need to be managed for an uncluttered clean appearance.

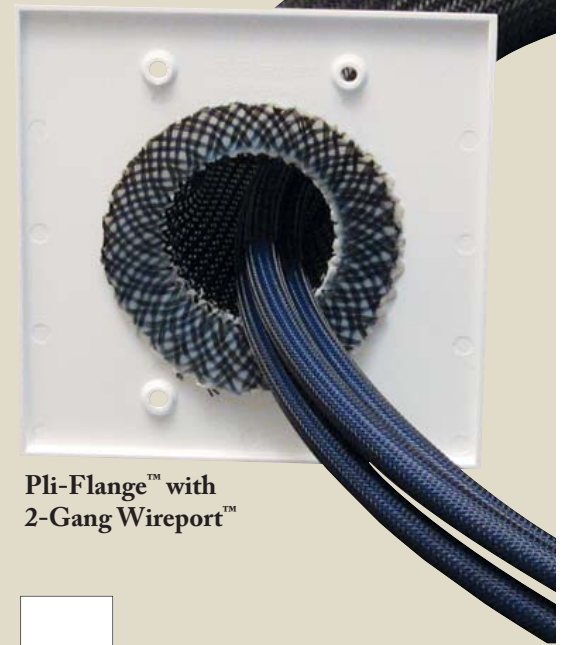

Pli-Flange™ cable sleeving is currently available in two diameter sizes, 1 ¼" and 1 ¾", which fit the single and double gang plates respectively. Currently available in Black and White and other colors available upon request. Available lengths are 3 ft, 5 ft, 7 ft, and 10 ft.

Pli-Flange™ with 2-Gang Splitport™
